The original Assignment transferring the rights in the above-identified patent application to Digital Gene Technologies, Inc. was forwarded on March 19, 2002 to the Assignment Branch of the USPTO for recordation.

The Sequence Listing submitted herewith in computer readable form is identical to the written sequence listing submitted herewith, and is substantially identical to the sequence listing submitted previously. The Sequence Listing submitted herein is in the PatentIn 3.1 format, and may differ from the PatentIn 2.0 version originally submitted to the U.S. Receiving Office in the international stage of this application due to differences in the two software versions, which are primarily formatting in nature. The differences we noted are as follows:

1. The line spacing for the sequences is double spaced for PatentIn 3.1, whereas for PatentIn 2.0 it was single spaced. Thus, the overall document has different page numbering and more pages with the newer version of PatentIn.

2. In the filed version of the application, field <140> (which is the application number field) was blank and field <141> had the application date. In the PatentIn 3.1 version, if an application date is entered into field <141>, field <140> must be populated. We have included the PCT application number in this field.

3. SEQ ID NO: 44 (the anchor primer) has been corrected so that it reads 48 bases. The base pair numbers listed in the misc_feature field for the "N" bases have been fixed to read the correct position on the 48 base sequence. We have added a misc_feature also for base pair no 46 (the "V" base) to describe what V represents. Support for this addition is in the specification section describing the primer.

4. Three base pair counts were incorrect in the PatentIn file submitted previously. All of the bases themselves are present and correct, but for some reason the total number of bases calculated was incorrect. Thus the actual sequences for SEQ ID NO: 82, 91, 121 did not change when we regenerated the file. However, the #s listed in field <221> and at the end of the line containing the sequence have changed, since they are supposed to count the number of bases in each sequence.

Also, please note that the transmittal letter requesting a filing under 35 U.S.C. 371 mistakenly stated that amendments to the International Application had not been made. Amendments were made to page 9 of the Sequence Listing and page 51 of the specification. Such amendments were filed with a letter of August 3, 2001.

The Commissioner of Patents is authorized to charge any amount due, or credit any overpayment, to Deposit Account No. 50-0639. A duplicate copy of this paper is enclosed.
